

COVID Testing in Queensland

There are two types of tests to detect COVID-19 in Queensland. PCR tests, which are carried out in special health facilities 🏥, and Rapid Antigen Tests (RATs), which can be done at home 🏠. As cases continue to rise, both methods of testing are important.

There are currently long wait times in testing clinics around the state. Please be patient, pack a hat and water, our staff are working as quickly as they can.

While RATs may be hard to buy now, there will be more available in the coming weeks.

If you are sick with milder symptoms and not easily able to get yourself tested, please stay at home 🏠. If you cannot breathe properly, have chest pains, feel like you will collapse, or feel like you cannot take care of yourself, call 000 for an ambulance. Tell the person you are talking to that you have COVID-19. Ask for an interpreter if you need one. Remember, anyone can call on ambulance. It's a free service. Calling an ambulance can save your life. experiencing breathlessness, chest pain, or severe light-headedness, seek medical attention 🚑.

Remember, most people who get COVID-19, especially those who are vaccinated, will experience only mild illness.

TGA Approved COVID-19 Tests and Video Instructions

The Australian Therapeutic Goods Administration (TGA) has approved different types of rapid antigen COVID-19 tests. These are tests that you can do at home. You can check if the test kit you are using is approved here: <https://www.tga.gov.au/covid-19-rapid-antigen-self-tests-are-approved-australia>.

Below are links to video instructions for each test. These are usually easier to understand than the instructions in the packet.
